

Wanzhen Li

(617) 943-2541 | phinneyli0525@gmail.com | Boston, MA
www.wanzhenli.me

SKILLS

- **Testing:** QUnit, Karma, Playwright, Jest, MATLAB Unit Tests
- **JavaScript & Web:** React, Next.js, Node.js, LitElement, HTML5/CSS, TailwindCSS, Framer Motion
- **Web/API & Serving:** FastAPI, Flask, Streamlit, Vercel, Supabase, Hostinger
- **AI/ML:** RAG, LangChain/LangGraph, ChromaDB, Dify, PyTorch, TensorFlow, scikit-learn, Prophet
- **Data:** Python, SQL, PostgreSQL, MongoDB, ETL, DBMS Design, Tableau, Power BI
- **Cloud/DevOps:** AWS (S3, EC2), Docker, GitHub, JIRA, Figma
- **Languages:** English (Professional working proficiency), German (Professional working proficiency), Chinese (Native)
- **Certifications:** AWS Certified Solutions Architect, Google Advanced Data Analytics, Stanford & DeepLearning.AI - Machine Learning

PROJECT EXPERIENCE

PicToMerch — AI-Powered Photo Restyle Web App — React, Next.js, Playwright, Jest, PostgreSQL Aug 2025 – Present
eventpage.pictomerch.com

- Developed the React/Next.js front end with reusable components; wrote unit and integration tests for critical UI flows, and used **Playwright** for end-to-end testing across browsers to validate the full generation pipeline.
- Built an image-generation pipeline with a multi-modal model backend; applied prompt engineering to optimize output; deployed to 200+ beta users with 92%+ satisfaction.
- Designed A/B testing infrastructure over a PostgreSQL analytics dashboard tracking 500+ generations, monitoring style performance and improving prompt confirmation rate by 15%.
- Optimized processing with automatic compression and async parallel jobs, cutting generation time by 25% and API cost by 30%; added resilient retries with exponential backoff for rate limits (HTTP 429), achieving 99% job success.

FinDocs RAG System — Financial Document Q&A with LLMs | LangChain, LangGraph, ChromaDB, Streamlit, Python Oct 2025
www.findocs.online

- Developed an LLM Q&A application for financial documents (earnings reports, analyst notes, etc.) enabling automated information extraction and question answering with source attribution.
- Implemented a multi-stage RAG pipeline with document relevance scoring and quality gates; integrated retrieval evaluation and mandatory citation mechanisms to minimize hallucinations in financial contexts.
- Built a **testing and evaluation framework** with ground-truth test cases and automated regression suites, computing normalized exact match and retrieval accuracy (Hit@1) metrics to systematically validate pipeline correctness.
- Deployed an interactive Streamlit application processing multi-format documents (PDF/Excel/Word) with real-time query responses, transparent evaluation metrics display, and session-based document indexing using ChromaDB.

WORK EXPERIENCE

Synergies Intelligent Systems Mar 2024 - Present
Data Scientist(AI/LLM) *Boston, MA*

- Reviewed papers and open-source repos, benchmarked candidate models on accuracy, latency, and cost, and validated solutions with week-scale MVPs before committing to full builds; collaborated with product and client stakeholders to frame AI problems and define acceptance criteria.
- Delivered multiple AI features: integrated an open-source **LLM chatbot** for a furniture e-commerce site with unit-tested prompt templates and conversation flows; built an AI image inpainting feature using Stable Diffusion; created an auto-quotation model for a machined parts platform.
- Collaborated with engineers to build and test Python services (FastAPI/Flask) with logging and metrics; wrote integration tests for API contracts, deployed prototypes on Vercel/Hostinger, and supported smooth handoffs for iteration.

Data Analyst Sept 2023 - Feb 2024

- Automated ETL pipelines with SQL (Athena/S3) and Python; implemented **data-quality checks** (freshness, completeness, schema validation) to catch upstream issues early, reducing manual reporting effort and improving reliability of leadership reporting.
- Combined production and financial data from several systems into clean, standardized datasets; built executive KPI dashboards to track margin, inventory turns, and anomaly alerts for decision-making.
- Developed time-series forecasting and anomaly detection (SARIMA/Prophet/LSTM in Python) with backtesting validation to support planning and working-capital optimization; briefed Finance and Operations on insights and suggested actions.

EDUCATION

Boston University Aug 2021 - Jan 2023
Master of Science in Applied Business Analytics (STEM) *Boston, MA*

- **Coursework:** Data Science, Data Mining
