

Wanzhen Li

(617) 943-2541 | phinneyli0525@gmail.com | Boston, MA
www.wanzhenli.me

SKILLS

- **LLM:** RAG, LangChain/LangGraph, ChromaDB, Dify
- **ML & Data:** Python, PyTorch, TensorFlow, scikit-learn, Prophet, SQL, PostgreSQL, MongoDB, ETL, DBMS Design
- **Web/API & Serving:** FastAPI, Flask, Node.js/React/Next.js, Streamlit
- **Cloud/DevOps:** AWS (S3, EC2), Docker; Vercel, Supabase, Hostinger
- **BI Tools & Other:** Tableau, Power BI, JIRA, GitHub, Figma, HuggingFace
- **Languages:** English (Professional working proficiency), German (Professional working proficiency), Chinese (Native)
- **Certifications:** AWS Certified Solutions Architect, Google Advanced Data Analytics, Stanford & DeepLearning.AI - Machine Learning

PROJECT EXPERIENCE

FinDocs RAG System — Financial Document Q&A with LLMs | LangChain, LangGraph, ChromaDB, Streamlit, Python Oct 2025
www.findocs.online

- Developed an LLM Q&A application for financial documents (earnings reports, analyst notes, etc.) enabling automated information extraction and question answering with source attribution to support investment research workflows.
- Implemented a **multi-stage RAG pipeline** with document relevance scoring and quality gates to ensure answer reliability: integrated retrieval evaluation (coverage assessment, relevance scoring) and mandatory citation mechanisms to minimize hallucinations in financial contexts.
- Built a comprehensive **evaluation framework** with ground-truth test cases, computing normalized exact match and document-level retrieval accuracy (Hit@1) metrics to systematically measure and improve model performance.
- Deployed an interactive **Streamlit** application processing multi-format documents (PDF/Excel/Word) with real-time query responses, transparent evaluation metrics display, and session-based document indexing using ChromaDB vector store.

PicToMerch — AI-Powered Photo Restyle Web App — React, Next.js, Vercel, Supabase, PostgreSQL Aug 2025 – Present
eventpage.pictomerch.com

- Built an image-generation pipeline with a **multi-model backend** and **23+** style prompts (watercolor, Ghibli, Renaissance); applied **prompt engineering** techniques to keep facial features and colors consistent; deployed to **200+** beta users with **92%+** satisfaction.
- Optimized processing with automatic compression to 85% quality, and async parallel jobs, cutting average generation time by **25%** and API cost by **30%**.
- Added resilient retries for rate limits (HTTP 429) using exponential backoff + Retry-After, achieving **99%** job success; implemented clear progress tracking for runs up to **90s**.
- Built a PostgreSQL **analytics dashboard** over **500+** generations to run **A/B tests** and monitor style performance, improving prompt confirmation rate by **15%**.

WORK EXPERIENCE

Synergies Intelligent Systems Mar 2024 - Present
Data Scientist(AI/LLM) *Boston, MA*

- Worked with product and client stakeholders to **frame AI problems**, Reviewed papers and open-source repos, tested candidate models, and chose cost-effective, quick-to-deploy solutions; shipped **week-scale MVPs** to prove feasibility before full builds.
- Delivered multiple AI features: For a furniture e-commerce site, integrated a **open-source LLM chatbot** for customer support and built a “try in your space” AI image inpainting feature using Stable Diffusion; For a machined parts platform, created an auto-quotation model and explored a machining drawing → 3D CAD feature to streamline quoting and design review.
- Collaborated with engineers to deliver **Python** services (FastAPI/Flask) with logging and metrics; deployed prototypes on Vercel/Hostinger as appropriate, coordinated **API** contracts, and supported smooth handoffs for iteration.

Data Analyst Sept 2023 - Feb 2024

- Combined production and financial data from several systems into clean, standardized datasets; built executive **KPI dashboards** to track margin, inventory turns, and anomaly alerts for decision-making.
- Developed **time-series forecasting** & anomaly detection (SARIMA/Prophet/LSTM in Python) to support planning and working-capital optimization; briefed Finance and Operations on insights and suggested actions for their decision-making.
- Automated **ETL** with **SQL** (Athena/S3) and Python; added data-quality checks (freshness, completeness), reducing manual reporting effort and improving reliability of leadership reporting.

EDUCATION

Boston University Aug 2021 - Jan 2023
Master of Science in Applied Business Analytics (STEM) *Boston, MA*

- **Coursework:** Data Science, Data Mining, Financial Analytics, Enterprise Risk Analytics, Marketing Analytics

Beihang University Aug 2013 - Jun 2017
Bachelor of Arts in German Literature *Beijing, China*
